

# Low pt muon identification

$pp \rightarrow J/\psi(\mu(6)\mu(3))$  was simulated with initial layout atlsim700.01

$bb \rightarrow \mu(6)X$  background dataset

## Release 7.0.1

Natalia Panikashvili

Supervisor : Shlomit Tarem

The Technion, Israel Institute of Technology

# Moore reconstruction

The efficiency of tracks reconstruction in the Muon System vs.  $\mathbf{p}_t$  and  $\eta$

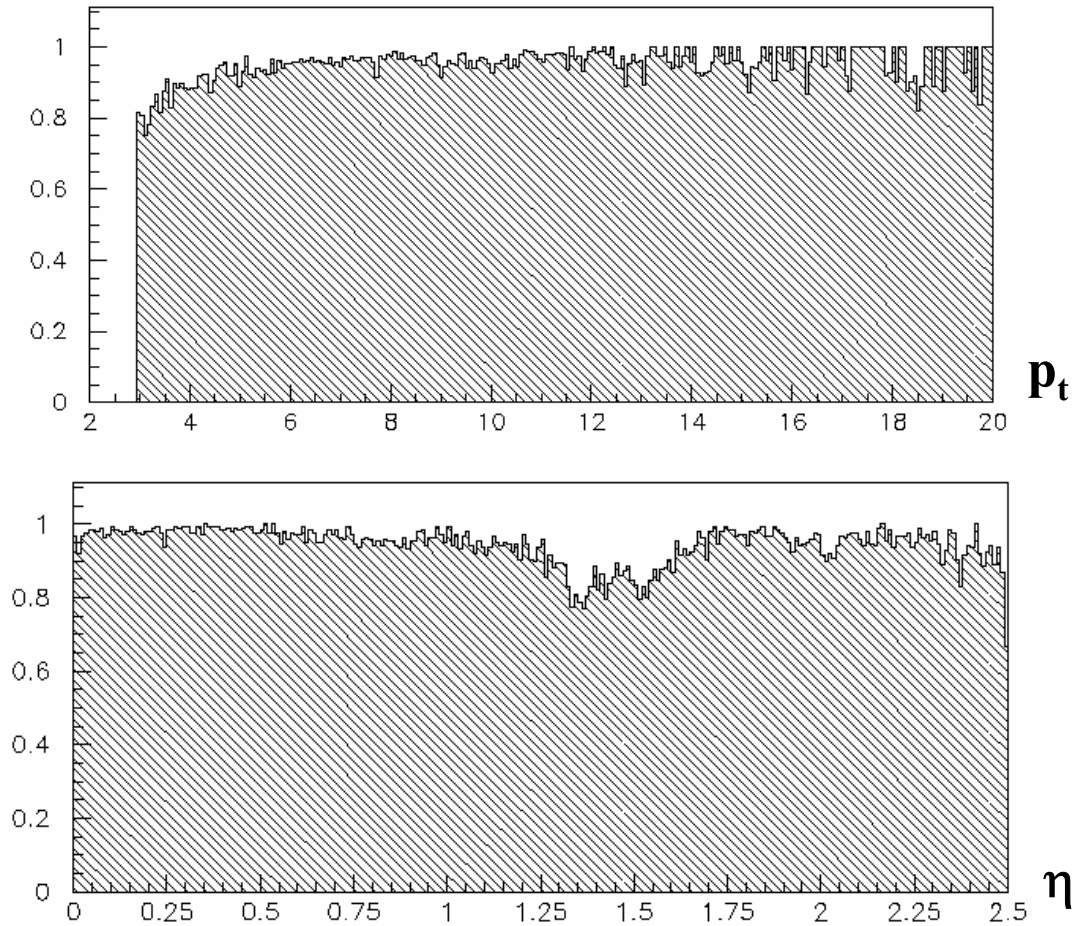

# MUID stand alone

The efficiency of the Muid Stand Alone efficiency vs.  $p_t$  and  $\eta$

# MUID MuidComb

The efficiency of the MuidComb efficiency vs.  $\mathbf{p}_t$  and  $\eta$

Dimuon ( $J/\psi \rightarrow \mu(3)\mu(6)$ )reconstruction  
efficiency

<i>Generated tracks</i>	<i>ID tracks</i>	<i>MOORE tracks</i>	<i>MUID tracks</i>
<b>20000</b>	<b>98%</b>	<b>57%</b>	<b>50%</b>

In 44% of the events only one muon is reconstructed by  
MUID!!!

My purpose is to find the second muon by using the  
association between ID tracks and Moore digits

Muid

1<sup>st</sup>  $\mu$

2<sup>nd</sup>  $\mu$  missing

Muid – ID track  
association

Inner detector (ID)

1<sup>st</sup> track

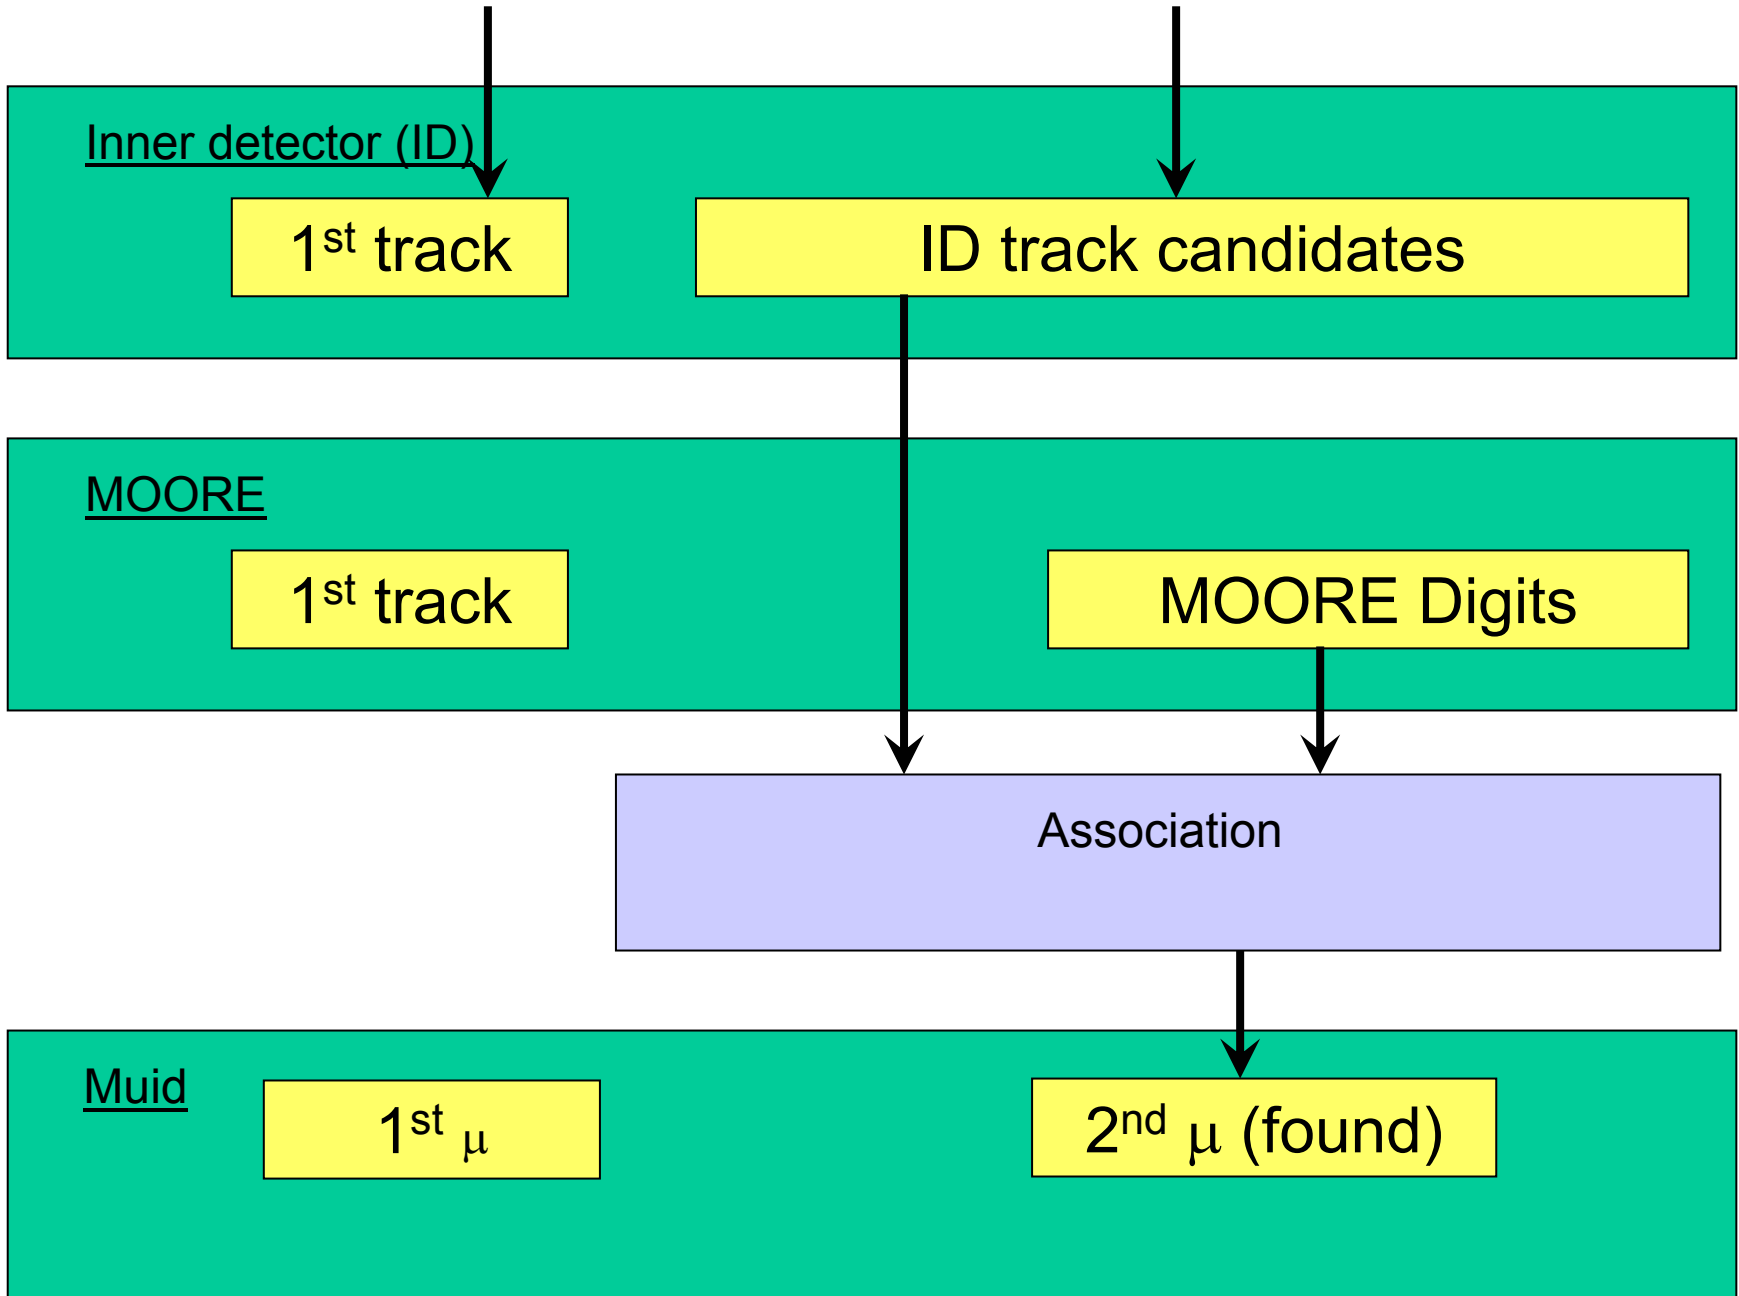

Collection of non-associated ID  
tracks

Invariant mass  
filtering

$M_{J/\psi} = 3.096 \text{ GeV}$

Invariant mass  
window : 2 – 4 GeV

*20000 events  $pp \rightarrow J/\psi(\mu(6) \mu(3))$*

***Cut\_1***     ***Invariant mass window 2-4GeV***

***Cut\_2***     ***3GeV < pt (ID candidates) < 10GeV***

*89% ID\_tracks (ID\_candidates) after CUT\_1 and CUT\_2*

***Cut\_3***     ***ID candidate-MDT digits***

***(inner station) association or ID candidate-CSC  
digits association***

***ID candidates that were associated with MDT  
digits or CSC digits  $\rightarrow$  ID candidates -  
RPC/TGC digits***

*$Pp \rightarrow J/\psi(\mu(6)\mu(3))$  dataset  $\sigma=5nb$   
(44% events have only one muon reconstructed by MUID)*

	Number of “pseudo - muons”	Number of re-reconstructed MUONS PURITY
MDT+CSC	6255(71.5%) - 100%	6218 – 99.4%
<b>MDT+CSC+PHI</b>	5760(66%) - 100%	5726 – 99.3%

*$bb \rightarrow \mu(6)X$  background dataset  $\sigma=3600nb$   
(80% events have one muon ...)*

✚

	Number of “pseudo-muons”	Number of re-reconstructed MUONS PURITY
MDT+CSC	203(0.85%)-100% - <b>98654</b>	56 - 27.5% - <b>27130</b>
MDT+CSC+PHI	139(0.58%)-100% - <b>67317</b>	52 - 37.4% - <b>25176</b>

□

## *Conclusions*

- *71.5 % of muons were re-reconstructed (by using only MDT and CSC digits information) with purity 31.7%*
- *66 % of muons were re-reconstructed (by using MDT, CSC, TGC, RPC digits information) with purity 42.2%*

## *Muon week plan:*

- *Details of ID- MOORE digits association*
- *Invariant mass distribution of signal  
+background*
