General survey of polarization observables in deuteron electrodisintegration

(H. Arenhövel, W.L., E.L. Tomusiak)
Eur. Phys. J. A 23, 147–190 (2005)

$d(e,e'N)N$ and $d(\vec{e},e'N)N$ with various beam and target polarizations

- 35 independent observables
- 324 linearly independent observables
  (quadratic relations exist among them)

- various NN potential models including CC calculation with a renormalized p-space Bonn pot.
- MEC (meson exchange current)
- IC (Δ-currents)
- R (relativistic corrections for one-body j_μ)
