

Upper panel: NC over CC ratio of differential cross sections versus the outgoing nucleon kinetic energy, for $g_A^s = 0, -0.10$ and using the RFG, RSM-PWIA and RSM-ROP models, as indicated in the legenda. Lower panel: NC over CC ratio of integrated cross sections versus g_A^s for the RFG, RSM-PWIA and RSM-ROP models, as indicated. Curves including Coulomb Distortion effects within the effective momentum approximation (EMA) are also shown.
